From the Pen of Dr. Royal Lee

(1895-1967) Inventor,
 Scientist, Genius, Founder of
 Standard Process, Inc.

"Any "foreign protein" in the bloodstream may excite allergic reactions. When we become allergic to a food it may be because we did not completely digest it (previously) and it (leaked) through the stomach, or a lesion in the bowel . . . once sensitized to a specific protein, it becomes a very disturbing thing (to the body.)"

A Partial List of Conditions Related to Nutritional Deficiencies

Allergies - Hay Fever
 Ankle Swelling
 Arthritis
 Back Pain
 Blood pressure - High or
 Low
 Bronchial Conditions
 Bursitis
 Circulation, Poor
 Colitis
 Colon, Spastic
 Constipation
 Cough, Chronic/Allergic
 Diarrhea
 Disc Problems
 Diverticulitis
 Dizziness (Vertigo)
 Emphysema
 Fatigue, Chronic
 Feet, Cold or Burning
 Feminine Problems
 Gall Bladder Disorders
 Gas
 Glandular Troubles
 Headaches
 Heart, Fast or "Nervous"
 Hemorrhoids
 Impotence
 Injuries to Soft Tissues
 Insomnia
 Joint Pain
 Kidney Problems
 Knee Pains, Chronic Leg
 Pains, Cramps, Tingling,
 Numbness
 Liver Problems
 Nervousness
 Neuralgia
 Prostate Trouble
 Sciatica
 Shingles
 Sinus Trouble
 Throat, Sore / Hoarse /
 Congested
 Thyroid Conditions
 Ulcers -- Stomach,
 Duodenum, Skin
 Yeast Infections

Allergy "Season" only finds some bodies

Sneezing, wheezing, running nose, itchy eyes, blotchy skin -- here we go again with allergy season!

Sneezing, wheezing, coughing and itching are commonly considered symptoms of allergies, but joint stiffness, sluggishness, headaches, alternating constipation and diarrhea – these symptoms and others can also be signs of an "allergic reaction," a "sensitivity," or an "intolerance" to something entering your body.

Why do some of us suffer every year, others have good years and bad years, while others never suffer allergies??

To answer this, let's understand how the body works and what you can do to help yourself, your family, friends and coworkers with their symptoms of allergies the natural way, without medications!

The skin is the most important part of the immune system. It protects us from the outside world. We also have a special "skin" that protects us from our inside world, which is the mucus membrane. This moist tissue covers the inside of your mouth, throat, stomach and intestines. It also lines your nasal passages and lungs. The purpose of these highly specialized tissues is to protect your body from foreign substances. An important principle to understand is that this "skin" is the first defense for your immune system. When your skin allows these foreign substances to "leak" through into your blood stream, that's when the real trouble begins.

Immune Challenges are met by antibodies

Allergic reactions begin when substances capable of beginning a "reaction" enter through your nose, lungs, skin or intestines. These substances are commonly thought to be pollen and foods, but they can also come from synthetic chemicals in our environment, drinks or foods.

Regardless of the source, **all allergic reactions are a response by your body to the foreign substance.** The body responds by sending *antibodies* to the rescue.

Antibodies are an important part of the body's natural defense system and are produced normally by our white blood cells to help fight infection or toxins. These white blood cells make antibodies to bind with the foreign materials and then eliminate them. This is a great design!

If this antibody system is designed to protect me from bacteria, viruses and parasites – Why am I allergic to foods, perfume and cleaning solvents?

Let's discuss foods first. One way a body can become overly sensitive (allergic) to common foods occurs when poor digestive function sends partially digested foods down the intestines for absorption. The mucus membrane lining your intestine is supposed to absorb the good nutrients and keep out the rest. If that lining is unhealthy and "leaky," allergic reactions begin. That's because the "leaky" state of the intestines allows large protein particles from partially digested foods to be absorbed into the blood stream. These particles are recognized as "foreign" by the immune system, and they are removed from the body by the immune system, by binding with antibodies.

Similarly, chemicals in our environment challenge our immune system by irritating the mucus membranes of the nose and lungs, making them "leak," and thereby allowing foreign substances to enter the tissues. The immune system must respond yet again.

Additionally, the poor quality of the food we eat, poor digestion, and unhealthy bowel flora also contribute to nutritional deficiency. A nutritionally deficient body does not have the necessary nutrients available to build and maintain healthy tissues, including the skin and mucus membranes that form barriers to protect us. In this way symptoms of allergies begin.

One can see how in our world full of pollution, synthetic foods and chemicals of all types, our immune systems are challenged constantly. We often become overly sensitive to common substances. Such a constant demand on the immune system to respond to "challenges" can **result from nutritional deficiency and cause nutritional deficiency, creating a vicious cycle, eventually leading to immune system exhaustion.**

A natural approach to cause and care of allergies

To summarize the cause of allergies:

- Nutritional deficiency can be the cause of allergies.
- Poor digestion can be the cause of allergies.
- Insufficient healthy bowel flora can be the cause of allergies.
- Environmental toxins can be the cause of allergies.

Understanding the non-drug approach to treating the CAUSES of Allergies

In previous issues of The Nutritional Essentials we have addressed each of these important principles of HealthBuilding. Please refer to Issue 1.3 for digestive support, Issue 1.5 for the importance of bowel flora, Issue 1.6 for the importance of purification of the body for health, and Issue 1.7 for simple ways to enhance the immune system. And **always** take **Catalyn** to prevent nutritional deficiency.

Even though we eat the right foods, support the body with digestive enzymes, probiotics, organic minerals and vitamin complexes, we may still experience symptoms of ALLERGIES from time to time. Reactions such as sneezing, wheezing, running nose, itchy eyes and many others are caused by the release of histamine in the affected body tissues.

Question: Should I use anti-histamines when I feel allergic symptoms?

Histamine is involved in myriad physiological conditions, all with the goal of supporting healing. When antibodies bind with foreign substances, histamine is released to begin a process of flooding the irritated tissue with healing fluids. This inflammatory reaction can be quite uncomfortable, but is a necessary part of the healing process. One does **not** want to inactivate histamine, although it is ideal to clear the histamine from our tissues efficiently after it has done its job.

Drug forms of antihistamine may interfere with the healing purposes of histamine, and frequently have side effects. More importantly, these drugs may be altogether avoided by supporting normal body processes. What we need is a natural product that helps the body handle the histamine reactions, relieve symptoms, and support healing. For this exact purpose we recommend:

Antronex® which contains Yakriton, a liver fat extract discovered in the 1920's. Yakriton has been shown to help the liver efficiently filter the blood, removing excess histamine and toxins from the blood.

Protection of the stomach, nasal passages, lungs, liver and kidneys is the ultimate HealthBuilding goal when it comes to strengthening the body to handle allergic reactions. A whole food concentrate product which supports all these body systems is appropriately named Allerplex®.

Allerplex® is a special combination formula of whole food concentrates containing a wide variety of nutrients effective in helping maintain a healthy immune system. Allerplex is useful in supporting proper acid/alkaline balance, and sustaining healthy liver function. Allerplex has been used by doctors since 1959 for this very purpose.

General Whole Food Guidelines for Allergic People

1. Live a healthy lifestyle with whole foods and whole food concentrates as outlined in The Nutritional Essentials – Newsletter(s).
2. Take Allerplex 1-3 per day for life[†].
3. When symptoms of allergies are on the rise, take 1-3 Antronex per hour to help the liver clear out histamines until symptoms subside[†].

Patients Speak About Allergies

“My entire life I suffered bad allergies. Sneezing, runny nose so bad at times they would lay me out! My nutritional program has entirely cleared this up, AND my chronic cough I have had for over 10 years GONE!!” D.M.M.
